

How you treat your new 3D Microbladed Brow over the next 7 days will ultimately determine the healing, colour retention, final appearance and lasting result.

- Immediately after the procedure we apply a balm (We recommend Eucerine Aquaphor) to the area.
- Never touch the area before washing your hands immediately before.
- You need to apply this balm to the area every 3 hours for 6-7 days. Never let the area become dry or feeling tight.
- Do not scrub, rub or pick at the epithelial crust that forms. Allow it to flake off by itself. If it is removed before it is ready the pigment underneath it can be pulled out.
- Do not use any makeup near the procedure area for at least 3 days.
- When washing your face refrain from using soaps and creams on the tattooed areas for the heal time especially the first day after. When showering or bathing apply a thick layer of the balm and avoid putting your face directly in the shower stream.
- Pools, Jacuzzis, tanning, excess sweating, facials and saunas should be avoided for a period of at least 10 days or until procedure area is fully healed.
- Skin creams and products containing Retin-A, AHA or any kind of skin peel must not be used directly on the procedure area as it will fade and possibly distort the 3D brow.
- Always use sun block after the procedure area is healed to protect from sun fading.

What is Normal?

- Swelling, itching, scabbing, light bruising and dry tightness. this can be managed with soft gel ice packs. Balm first and place ice pack in plastic to avoid moisture directly on procedure area.
- Eucerine Aquaphor is a recommended balm and calm the itching and dry tightness.
- Immediately after the procedure the 3D brow colour appears very sharp and dark, this will soften and fade considerably as the healing process concludes.
- Final appearance of the 3D brow should not be considered for at least 6-8 weeks after final visit.
- Touch-up may be required to reshape or augment an area and is not done until after a 4 week period. This is a custom build brow and may take up to 3 times to ensure the pigment in the skin.
- Touch-ups may be needed after the initial procedure depending on your skin, medications and sun exposure. We recommend touch-ups to keep the 3D brow looking fresh and beautiful.
